

Maths at Weelsby Academy follows the Same Day Intervention model. This consists of two distinct phases:

MAIN INPUT

The main input lasts for around 40 minutes. This is based on the 'teach-practise' model, where basic and age related skills are demonstrated by the teacher before being completed on whiteboards using their mixed-ability talking partners by the children. At the end of this session, the children complete a short "diagnostic task". This task comprises a small number of basic fluency questions based at Age Related Expectations, leading towards a question with a little more reasoning (using and applying the skills they have just been taught).

After this session, the class go to assembly with the Teaching Assistant, while the teacher marks the morning's work. This identifies the groups for the SDI, and lasts for approximately 15 minutes.

SDI

During the same day intervention, pupils who fully achieved the age related expectation are given related tasks to further embed their understanding. Those that need extra support will work with the class teacher in a guided group, and can also be supported by the Teaching Assistant. This lasts for approximately 20 minutes. During their independent tasks, children who are 'green' are able to Fast-Track by self marking their work in order to move on to the deeper learning tasks (Gold). Our aim is to get as many children as possible to the Gold level.
